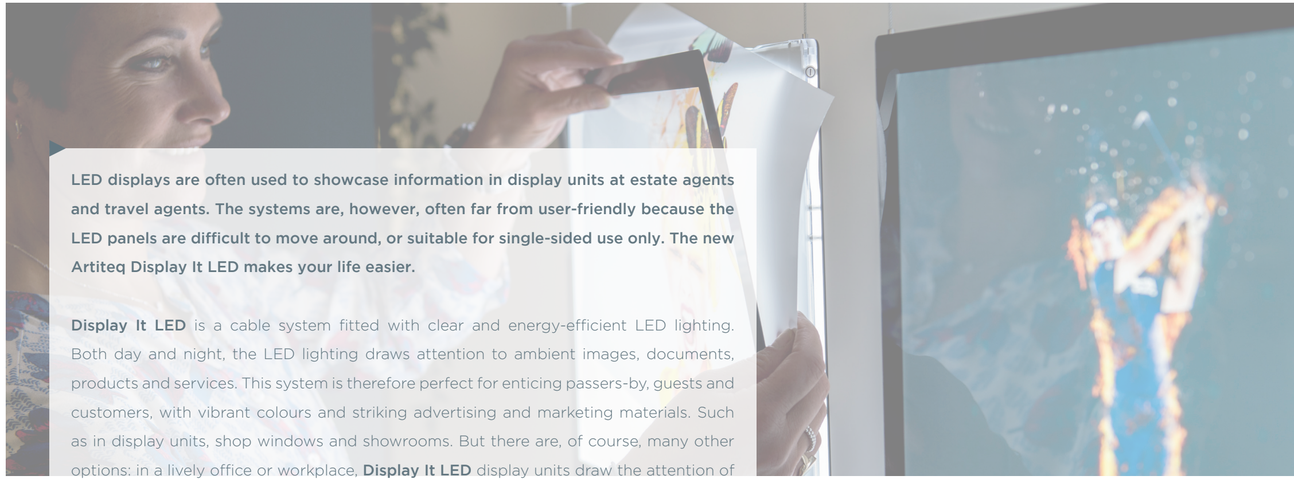
DISPLAY IT LED –
MAKE A STATEMENT WITH LED PANELS



LED displays are often used to showcase information in display units at estate agents and travel agents. The systems are, however, often far from user-friendly because the LED panels are difficult to move around, or suitable for single-sided use only. The new Artiteq Display It LED makes your life easier.

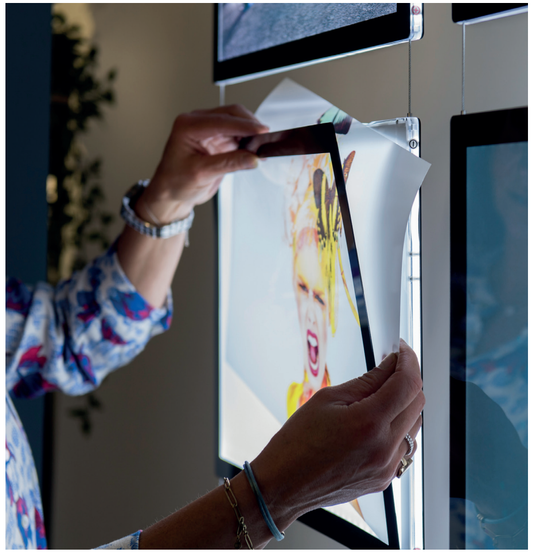
Display It LED is a cable system fitted with clear and energy-efficient LED lighting. Both day and night, the LED lighting draws attention to ambient images, documents, products and services. This system is therefore perfect for enticing passers-by, guests and customers, with vibrant colours and striking advertising and marketing materials. Such as in display units, shop windows and showrooms. But there are, of course, many other options: in a lively office or workplace, **Display It LED** display units draw the attention of employees and visitors and are a fantastic source of inspiration.

Display It LED is available in two different systems: FLEX and FIXED.

DISPLAY IT LED FIXED

Display It LED FIXED guarantees a professional and streamlined display, that makes a statement. Mount the innovative cable system to the wall or the ceiling. Let your imagination run wild and vary the layout and size of the LED panels (available in size A3 and A4). The content of the flexible LED panels, with crystal clear and energy-efficient lighting, can easily be changed by pulling the protective sheet on the LED panel towards you and inserting the translucent paper into the panel.

The **Display It LED** FIXED is suitable for fixed mounting to a wall or ceiling, enabling it to be placed in display units, shop windows or on a wall. The LED panels allow double-sided displays. If you require a single-sided display, a special reflective film (supplied with the panel) is inserted into the back of the LED panel, to prevent reflections.

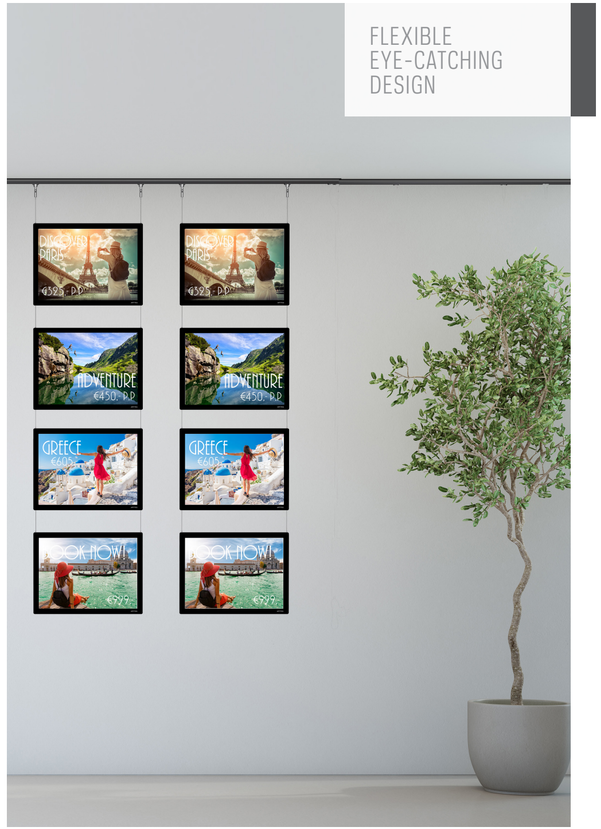


An auto-grip mechanism allows easy adjustment of the height of the LED panels, which can be used in either portrait or landscape orientation. This auto-grip mechanism allows the system's steel cables to run through the LED panels, connecting these together. The system's whole arrangement looks great. Streamlined and contemporary.

DISPLAY IT LED FLEX

The Display It LED FLEX can be mounted to the wall or the ceiling. The system is attached to a rail. The rail allows the LED panels to be hung along the entire length of the rail. This is a great, flexible, freestanding solution. This system is ideal in display units and shop windows, or wherever you wish and the display will attract attention both day and night!

The special adaptors, which are attached to one side of the steel cables for the LED panels, can very easily be twisted into and out of the rail, allowing maximum flexibility of the system. Similar to the **Display It LED** FIXED, the auto-grip mechanism allows the steel cables to run through the LED panels, connecting these together. This allows the height of the panels to be adjusted quickly and easily.



Mounting video

From a tropical holiday destination, to a spacious dream home, a state-of-the-art car, or eye-catching make-up: **Display It LED** boosts the visibility of anything you wish to tempt passers-by, guests or visitors with.

The special LED panels for the **Display It LED** are available in size A3 or A4, and can be used in either landscape or portrait orientation, and are equipped with bright LED lighting (approx. 3,000 Lux). This gives your display an extra dimension and boosts the attention paid to the display. The LED panels are slim (panel thickness is just 10 mm) and have a striking appearance. The system allows double-sided displays. When the panels are hung freely in a room, information can be inserted into both the front and back of the LED panel.

Double orientation

AN EYECATCHER

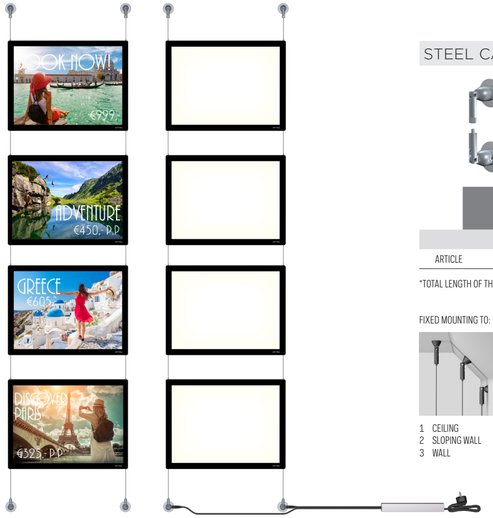
An auto-grip mechanism allows the steel cables to run through the LED panels, connecting these together. This gives a professional, streamlined display and allows the height of the panels to be quickly and easily adjusted.

The information that is displayed comes into its own when special translucent paper is used. We advise against using ordinary paper, as this reduces the brightness of the light, and negatively impacts the display.

Allows double-sided displays

Height is easily adjustable

DISPLAY IT LED FIXED



SUITABLE FOR FIXED MOUNTING TO A WALL OR CEILING

STEEL CABLE SET

	HANGING SET	TRANSFORMER**	
	2x 300 cm	60 VA	200 VA
